

Bus Shelters, Amenities Designed for Solar Sustainability

Brasco International

Brasco International has provided over 120 durable bus shelters for **SMART**, the local transit service provider in Southeast Michigan. When SMART recently rolled out FAST, a new high-frequency service with limited stops along three of Detroit's busiest corridors, Brasco updated their modern Eclipse design with ceramic frit glass panels, a matching suite of streetscape furniture, and custom color matching to support FAST branding.

These shelters also feature security lighting, USB port charging stations, and wayfinding technology, all fully powered by eco-friendly solar power. Passengers will receive real-time updates on bus arrivals while enjoying safe, secure shelter from the elements.

CHK America

The Connectpoint 32-inch Digital Bus Stop ePaper display offers remote schedule updating in a customizable presentation of real-time departures, custom messaging, and optional advertising. A Connectpoint DBS can be AC or solar powered and mounted to a bus shelter frame. The CP-32 has been tested in extreme weather and outdoor use, and it is readable in direct sunlight with an ePaper screen. The system's power and content are remotely managed by its cloud-based Connectpoint Asset Management System from a desktop or mobile device.
